HCL Water Trailers

The HCL water trailer can be tailored to fit your specific application. The average capacity of our water trailers is between 2800-3000 gallons, and trailer frames vary depending on customer preference and stock on hand.

The hydraulically powered water pump is easily controlled within the cab of the tractor. Each water trailer is equipped with a polyurethane tank.

The HCL Water Trailer is equipped with rear facing water jets. The rear jets provide versatility as the trailer can be used to facilitate your dust control efforts.
